

FOR IMMEDIATE RELEASE

Waltron Announces Change of Ownership

Whitehouse, New Jersey, USA – June 10, 2014

Renowned water quality instrument manufacturer Waltron announced today that it has recently undergone a change of ownership and control effective May 29, 2014. Formerly known as Waltron LLC, the new entity, Waltron Bull & Roberts, LLC, has assumed all operations and personnel of the company.

While the details of the transaction are confidential, all accounts payable and receivable have been transferred to the new entity as part of the deal. The trade name will remain Waltron.

Incoming President and CEO, Jonathan C. Guy, explained, “I am honored and excited to have the opportunity to carry on the 111-year legacy of the Waltron and Bull & Roberts companies. The company’s long history as a leader in water quality management is ever more relevant as the world’s demands for clean water and energy grow. We intend to expand our line of products and services to provide a more complete set of solutions for our customers.”

The company’s strategic plan includes major investments in technology, both in terms of new product capabilities and enhancements to customer support.

Outgoing owner and CEO, John M. Walsh, III, will remain associated with the new entity as the Chairman Emeritus through what is expected to be a three-year transition. Also joining Jon Guy on the company’s board are Eric J. Lomas, President of HT Capital Advisors in New York City, and Charles Cavin, former President of mobiKPI in Houston.

About Waltron

Waltron was founded in 1903 by chemists Bull & Roberts who introduced drinking water chlorination before the first city-wide chlorination system in the US was installed. Since then, the company has been at the forefront of many technical innovations including the first modern boiler water treatment, the first successful chemical treatment of large land-based desalination plants, the first acceptance of ultraviolet drinking water purifiers by the US Public Health Service, the first widely used oil pollution monitor, and the development and manufacture of water quality instruments for ultrapure water applications.

-more-

The company's current products include instrumentation for the measurement and control of dissolved oxygen, hydrazine, sodium, silica, phosphate, ammonia, copper, and several other parameters. Waltron also supplies potable water chlorinators and chemical metering pumps for military applications.

Waltron operates from two sites, a headquarters in Whitehouse, New Jersey, and a European sales and support office in Panningen, Netherlands. For more information visit www.waltron.net.
